Overview

This user guide provides step-by-step instructions for using the DHIS2 platform to collect, enter, validate, report, and manage summary data related to:

-  Sexually Transmitted Infections (STIs)
-  Contact Investigation
-  Elimination of Mother-to-Child Transmission (EMTCT) of HIV and Syphilis
-  Hospital-based maternal and infant registers

The system supports standardized national reporting, programme monitoring, and data management activities across Jamaica's HIV/STI/TB programme.

2. Background

The DHIS2 platform was developed in 2018 as a centralized national health information repository to support data collection, reporting, monitoring, and analysis within the Ministry of Health & Wellness. The platform enables Contact Investigators, PMTCT nurses, programme managers and monitoring and evaluation personnel to:

-  Submit monthly summary reports
-  Monitor report submission, completeness and timeliness
-  Validate data accuracy and consistency
-  Generate programme reports
-  Maintain and manage electronic hospital registers

The system improves data quality, accessibility, efficiency, and standardization across regions, parishes, and health facilities. As programme indicators evolve, the platform is updated to align with revised reporting requirements.

3. Purpose of the System

The DHIS2 platform is designed to:

- ✚ Facilitate timely and accurate reporting of programme data
- ✚ Support national monitoring and evaluation activities
- ✚ Improve data quality and accountability
- ✚ Strengthen access to standardized electronic reporting tools
- ✚ Support evidence-based decision-making and programme planning

4. System Modules

The platform contains two primary components, data entry module and tracker module.

4.1 Data Entry Module

This module is used for monthly reporting of:

-  STI Monthly Summary Reports
-  Contact Investigator Monthly Summary Reports
-  EMTCT Monthly Summary Reports

Users enter monthly aggregate data based on their assigned organizational unit and reporting period.

4.2 Tracker Module

This module is used to maintain and review electronic hospital registers, including:

-  Maternal HIV Register
-  Maternal Syphilis Register
-  HIV-Exposed Infant Register

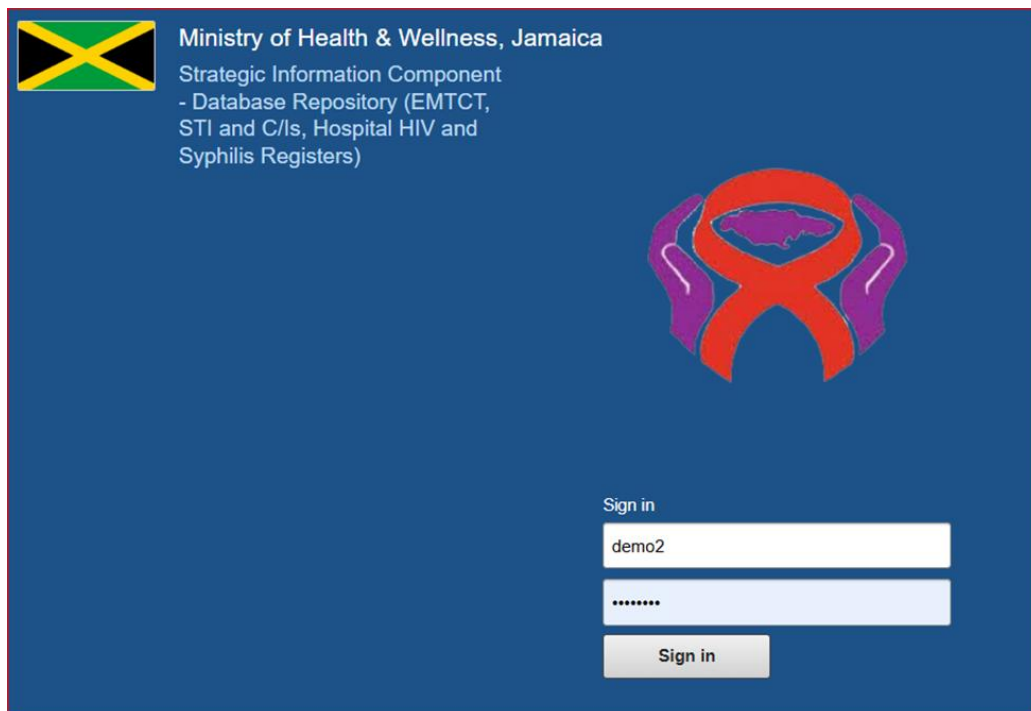

The Tracker Module allows healthcare workers to:

-  Search for client records
-  Register new clients
-  Update existing records
-  Export register data

5. Access to the platform

To access the DHIS2 platform, the following steps should be followed:

- ✚ Go to the website: emtct.moh.gov.jm
- ✚ Enter your assigned username (case-sensitive)
- ✚ Enter your secure password
- ✚ Click the **Sign In** button

Ministry of Health & Wellness, Jamaica

6. Data Entry Screen Layout

The DHIS2 main menu is in the top-right corner of the screen.

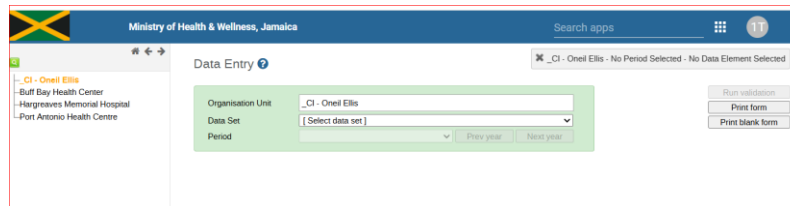

Figure 2: Main menu screenshot

6.1 Menu Items

The following are captured under the menu section:

1. **Data Entry** – this opens the monthly report data entry screen.
2. **Dashboard** – this section displays various summary reports.
3. **Browser Cache Cleaner** - Used to clear cached data if the system behaves unexpectedly.
4. **Reports** – This is used to generate summary reports by parish, region, quarter, or year.

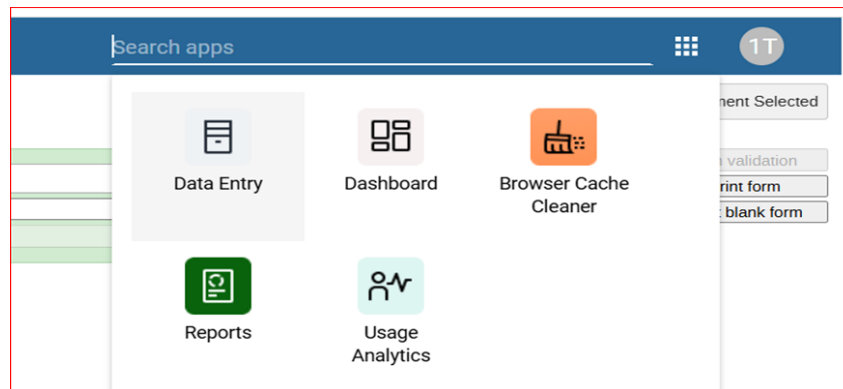

Figure 3: Menu items screenshot

6.2 Organizational Units

The platform is designed to capture data and view reports at the following levels:

- ✚ National - Jamaica
- ✚ Regional - regional health authorities
- ✚ Parishes
- ✚ Health Facilities
- ✚ Individual Contact Investigators

Users will only be able to view the organizational units assigned to them for data entry and reporting purposes. The Organizational Unit panel is located on the left side of the screen.

Each monthly report (Data Set) is associated with a specific type of organizational unit.

The screenshot shows a web application interface for data entry. The browser address bar displays `emtct.moh.gov.jm/dhis-web-dataentry/index.action`. The header features the Jamaican flag and the text "Ministry of Health & Wellness, Jamaica".

On the left, a tree view lists organizational units under "Jamaica":

- [-] Jamaica
 - [+] Demonstration 2026
 - [-] North East Region
 - [-] Portland
 - Buff Bay Health Center**
 - Manchioneal Health Center
 - Port Antonio Health Centre
 - Port Antonio Hospital
 - _CI - Oneil Ellis
 - _CI - Tashandwa Fuller
 - _CI - Terrica Hynes-Daley
 - [-] St. Ann
 - [-] St. Mary
 - [-] South East Region
 - [-] Southern Region
 - [-] Western Region

On the right, the "Data Entry" section contains a form with the following fields:

- Organisation Unit: Buff Bay Health Center
- Data Set: STI Monthly Summary 2026+ (dropdown menu)
- Period: [Select period] (dropdown menu) with "Prev year" and "Next year" buttons.

Figure 4: Data entry screenshot

6.3 Selecting a Monthly Report for Data Entry

The organizational unit selected determines which monthly report can be completed. Table 1 below illustrates an example of the type of monthly report by organizational unit.

Table 1: Organizational Unit and Respective Monthly Report/Data Set

Site Type / Organization Unit	Monthly Report / Data Set
Physical Site Name e.g. Buff Bay Health Center	STI Monthly Summary 2026+
Contact Investigator Name e.g. CI – Jane Doe	Contact Investigator Monthly Summary 2026+
Parish Name: e.g. Portland	EMTCT Monthly Summary 2026+

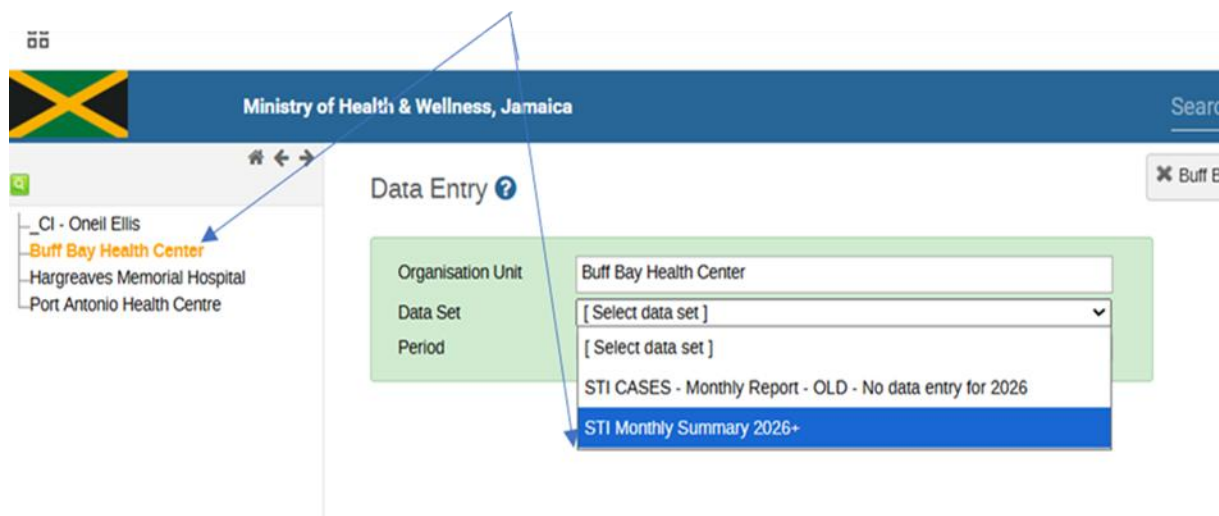

Figure 5: Selecting report using physical site

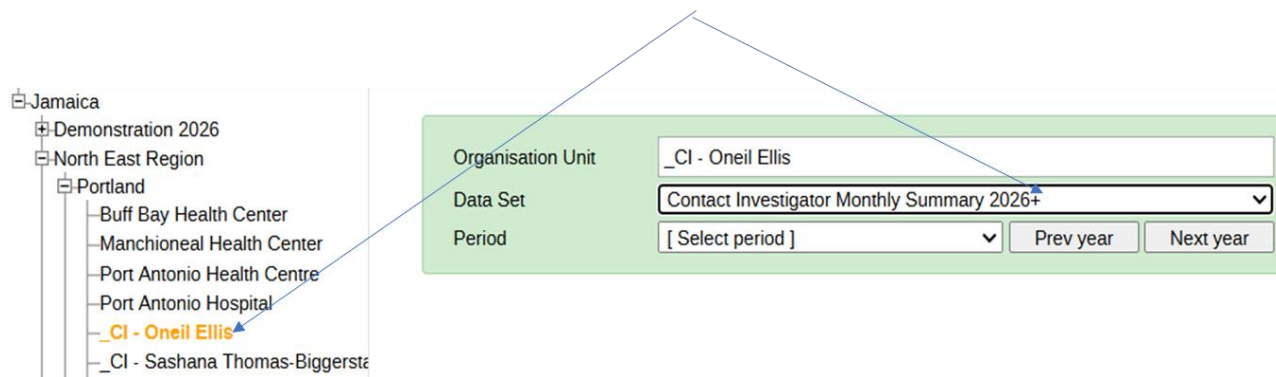

Figure 6: Selecting report using contact investigator name

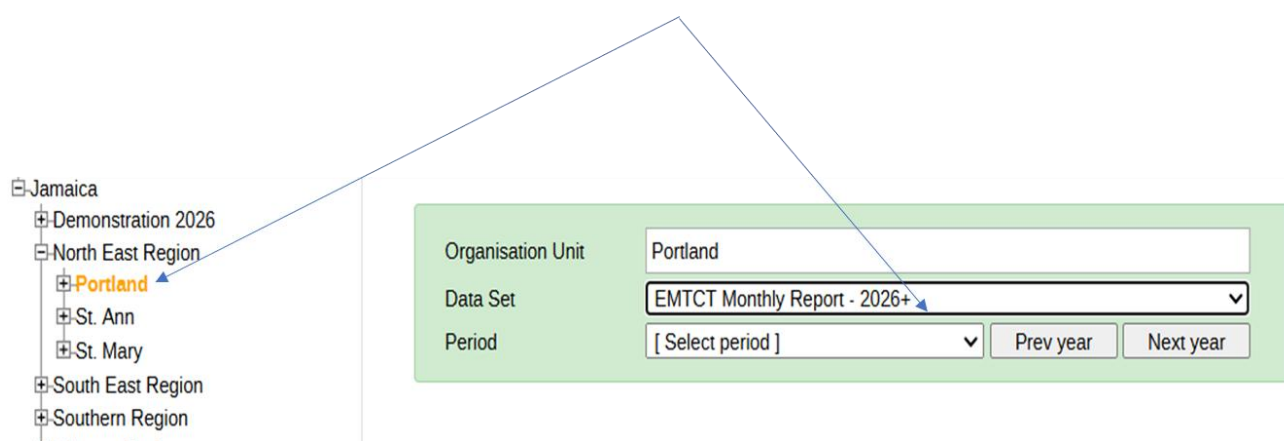

Figure 7: Selecting report using parish name

6.4 Selecting the Reporting Period

Use the **Previous** and **Next** buttons to navigate between reporting periods. Users may add, edit, or review reports for the selected month and year.

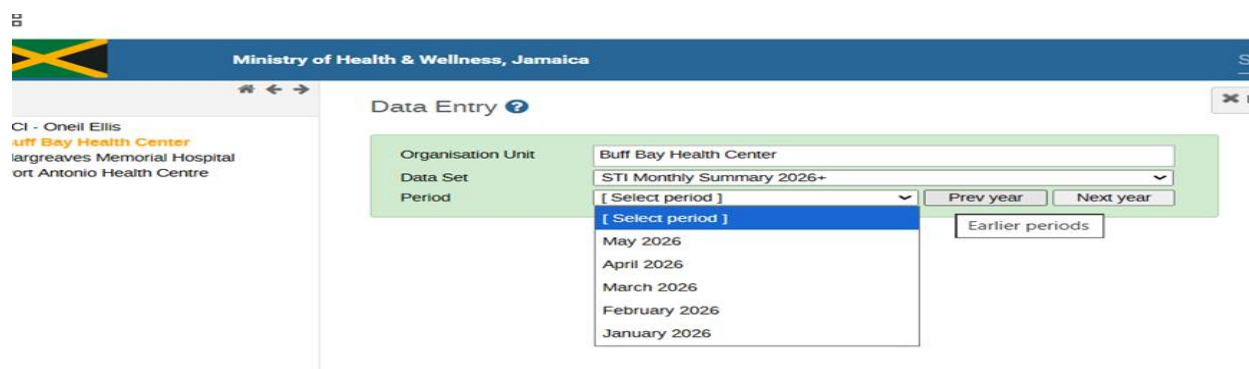

Figure 8: Selecting the reporting period

To begin data entry:

1. Select the appropriate site or organizational unit from the left panel.
2. Select the corresponding data set.
3. Select the reporting period.

7. Data Entry – STI Monthly Summary Report (Titled STI Monthly Summary 2026+ on the database)

7.1 Accessing the Data Entry Screen

There are three ways to access the data entry screen:

1. The Data Entry module opens automatically after login.
2. Click the map of Jamaica in the top-left corner.
3. Select **Data Entry** from the Main Menu.

7.2 Selecting the Health Facility

1. Select the appropriate health facility.
2. Once selected, the facility name will change to a brownish-yellow colour.

7.3 Selecting the Data Set

1. If not automatically selected, choose **STI Monthly Summary 2026+**.

7.4 Selecting the Reporting Period

1. Select the relevant reporting month and year.

7.5 Completing the STI Monthly Form

Once the form appears:

1. Confirm that the correct month and year are selected.
2. Complete all required fields.
3. Enter a value of **ZERO (0)** where the indicator value is zero.
4. Avoid leaving fields blank.
5. After completing data entry, click **COMPLETE**.

Figure 11: Screenshot of EMTCT Monthly Summary Report

10. Running Validation Checks

Validation checks are built into the EMTCT form to improve data accuracy and consistency.

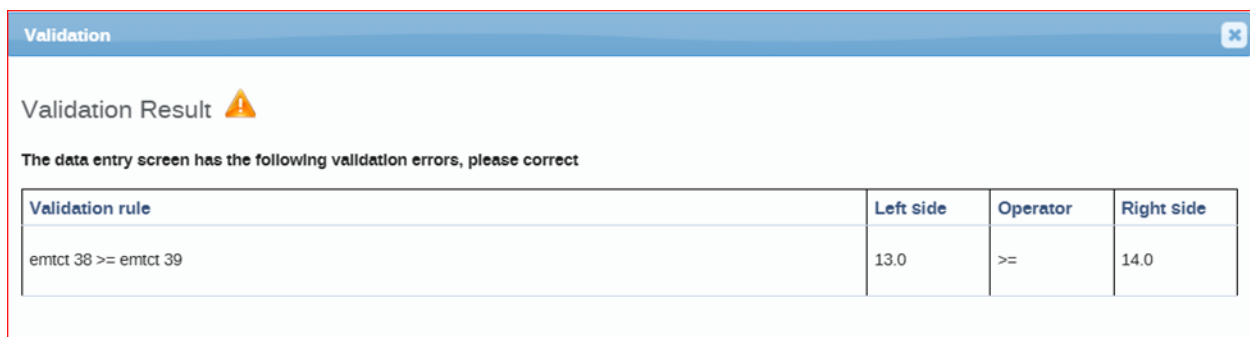

10.1 Running Validation

A horizontal bar containing three buttons: 'Complete' (green), 'Incomplete' (grey), and 'Run validation' (grey). The buttons are separated by a vertical line.

Figure 12: Running Validations

1. Click the **Run Validation** button located at the top or bottom of the form.
2. Any potential errors or inconsistencies will be highlighted.
3. Review the identified issue and correct the data where necessary.

A dialog box titled 'Validation' with a close button. It displays a 'Validation Result' with a warning icon. The text states: 'The data entry screen has the following validation errors, please correct'. Below this is a table with validation rules.

Validation rule	Left side	Operator	Right side
emtct 38 >= emtct 39	13.0	>=	14.0

Figure 13: Screenshot indicating possible error highlighted

		HEI	HIV+
37	Total number of children linked to Programme (HEIs and HIV-positive children) including those who are lost to follow-up	6	1
38	Total number of children in Care (HEIs and HIV-positive children) including new and those retained in care	6	7
39	Total number of new children in Programme (HEIs and HIV-positive children)	7	7

Figure 14: Screenshot indicating error

Important Note

If a validation rule appears to be incorrect, notify the HSTU/SI Unit so that the rule can be reviewed, corrected, or removed.

11. Reporting – Data Set Reports

To access reports:

1. Click the **Reports** button from the Main Menu.
2. Select **Data Set Report**.

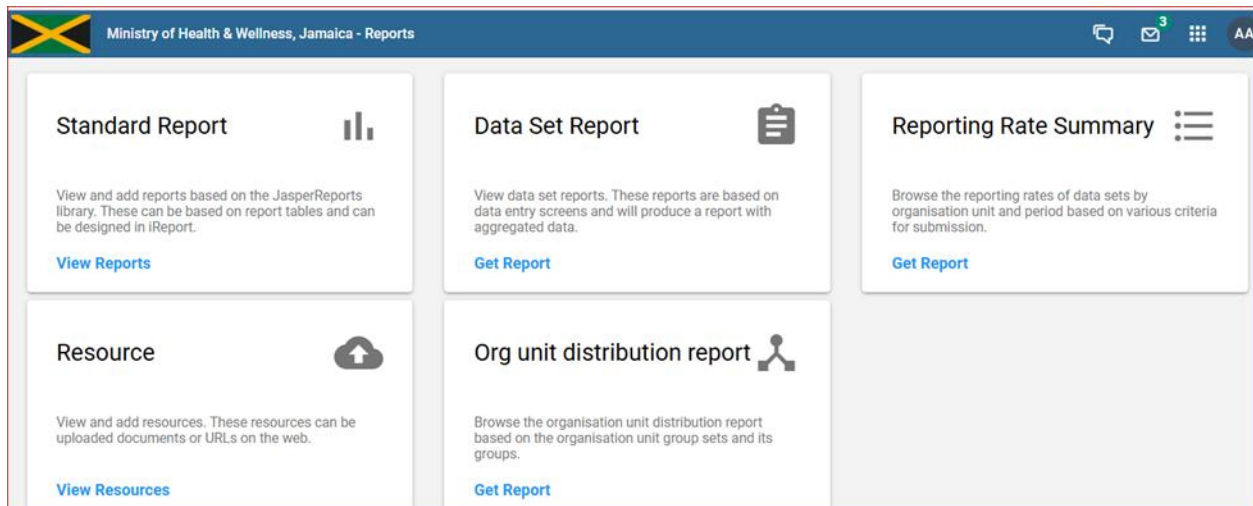

Figure 15: Screenshot of the report menu

11.1 Report Filters

Depending on the user's access level, reports may be generated by:

- + Region
- + Parish
- + STI Site
- + Contact Investigator
- + Data Set Type (STI, Contact Investigator, EMTCT)
- + Reporting Period (Monthly, Quarterly, Semi-Annual, Yearly)
- + Specific Year
- + Specific Quarter or Month

11.2 Generating Data Set Reports

1. Select the required filters.
2. Click **Get Report** at the bottom of the screen.
3. Scroll down to view the generated report.

11.3 Formatting Tip

If the exported report formatting is unclear:

1. Highlight the report content.
2. Copy the selected information.
3. Paste the content into Microsoft Word or Excel for improved formatting.

Figure 18: Screenshot showing the highlighted report for export in Microsoft Word or Excel

12. Reporting Rate Summary

The Reporting Rate Summary provides information on reporting completeness and timeliness.

Users may generate reports by:

-  Region
-  Parish
-  STI Site
-  Contact Investigator
-  Data Set Type
-  Reporting Period
-  Quarter
-  Month
-  Year

To generate the report:

1. Select the required filters.
2. Click **Get Report**.
3. Scroll to the bottom of the screen to view the report.

Reports may be exported to Excel or PDF; however the formatting and layout is sub-optimal due to the current version of DHIS2 being used.

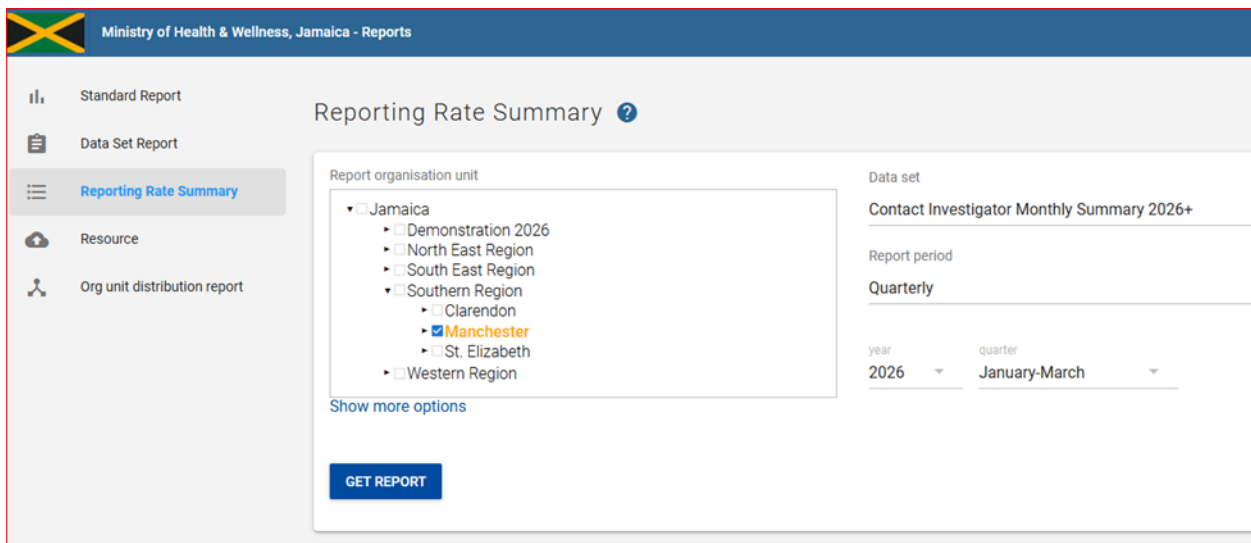

Figure 19: Screenshot of reporting rate summary page

12.1 Reporting Rate Definitions

The table below defines key terms that are used to describe reporting rates.

Table 2: Reporting Rate Definitions

Metric	Focus	Definition
Actual	Submission	Number of forms received
Expected	Requirement	Total number of forms due
Reporting Rate	Reporting Count	Number of unique reporting units that submitted their data and clicked the “complete” button for the selected period
Actual on Time	Timeliness	Number of forms submitted before the deadline of the 6 th calendar day following the reporting month
Rate on Time	Efficiency (%)	$(\text{Actual on Time} \div \text{Expected}) \times 100$

13. Hospital Registers

Hospital registers are maintained physically by PMTCT nurses. The DHIS2 Tracker Module provides an electronic version of these registers to support online review and updates.

The following registers are available electronically:

1. Maternal HIV Register
2. Maternal Syphilis Register
3. HIV-Exposed Infant Register

13.1 Accessing Hospital Registers

1. Select **Tracker Capture** from the Main Menu.
2. Select the relevant hospital site.
3. Once selected, the available registers will appear.

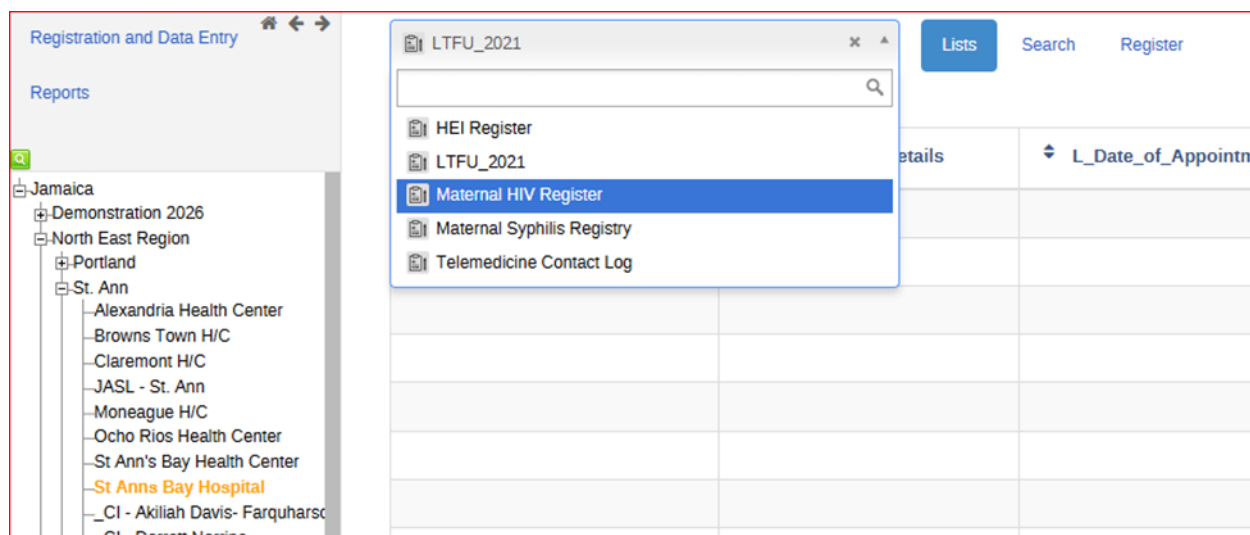

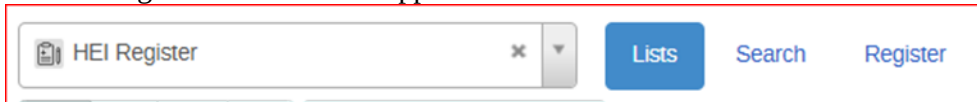

Figure 20: Accessing registers screenshot

13.2 Searching for Existing Client Records

1. Select the appropriate register.
2. A list of registered clients will appear.

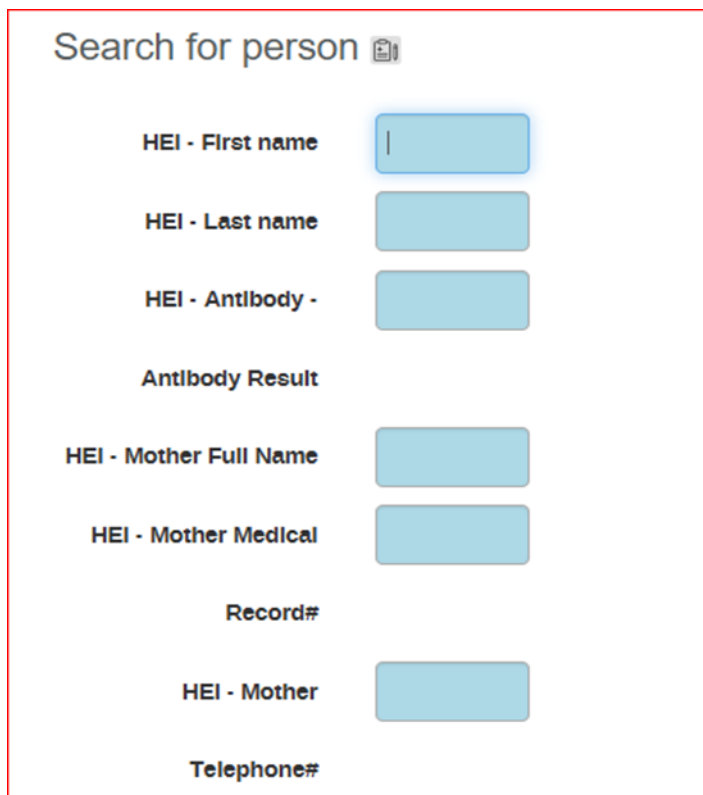

The screenshot shows a web interface for the HEI Register. On the left, there is a dropdown menu with a document icon and the text 'HEI Register'. To the right of the dropdown are three buttons: 'Lists' (blue), 'Search' (light blue), and 'Register' (light blue).

3. Users may browse the list or use the search feature.

13.3 Searching for a Client

1. Enter the relevant search criteria.
2. Scroll to the bottom of the screen.
3. Click the **Search** icon.
4. Matching client records will appear below.

The screenshot shows a search form titled 'Search for person' with a document icon. The form contains several input fields with labels to their left: 'HEI - First name', 'HEI - Last name', 'HEI - Antibody -', 'Antibody Result', 'HEI - Mother Full Name', 'HEI - Mother Medical', 'Record#', 'HEI - Mother', and 'Telephone#'. Each label is followed by a light blue rectangular input box.

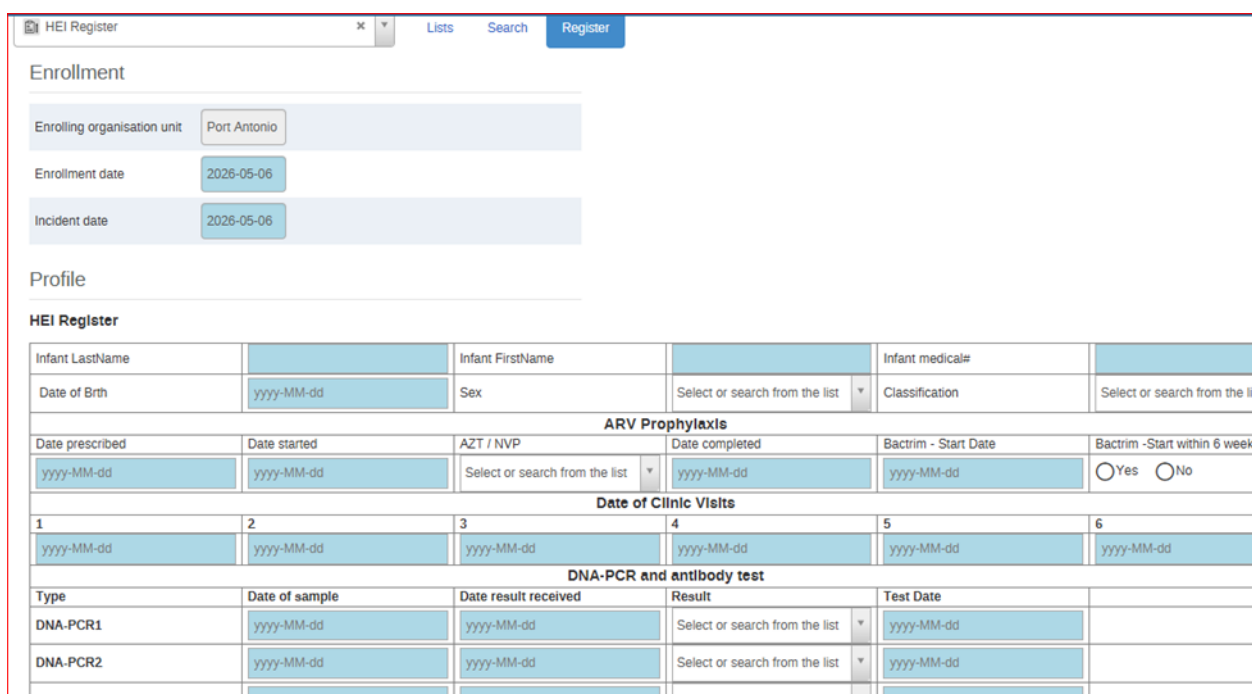

Figure 21: Screenshot of search feature

13.4 To retrieve a client record:

1. Click the client's name.
2. The full register record will open.

4. Click **Save** to retain the updates or **Cancel** to discard changes.

14. Data Quality Guidelines

Users should routinely check for completeness, accuracy, timeliness and consistency of data entered. Table 3 and 4 define each activity for each database.

14.1. PMTCT Database

Table 3: Recommended data quality activities and their definitions for the PMTCT Database

Data Quality Activity	Definition	Recommended Actions	Responsible Individual/Entity
Completeness	The extent to which all required PMTCT client information, laboratory results, maternal and infant outcomes, and service delivery data are fully captured within the database	• Monitor reporting rates from all antenatal clinics, labour wards, postnatal clinics, and paediatric HIV services. • Conduct monthly reviews of missing maternal and infant records. • Reconcile PMTCT registers, laboratory reports, and electronic database entries quarterly • Train staff on PMTCT indicator definitions and documentation requirements.	PMTCT Coordinator, PMTCT Nurse, Strategic Information Component
Accuracy	The degree to which PMTCT data correctly reflects information documented in source records (registers and laboratory reports)	• Conduct routine source document verification exercises quarterly. • Validate key indicators such as maternal HIV status, ART initiation dates, infant prophylaxis, and PCR results before entry.	PMTCT Coordinator, PMTCT Nurse, Strategic Information Component

		• Standardize data collection tools and reporting templates across all facilities. • Perform periodic data validation checks to identify duplicate or inconsistent records.	
Timeliness	The extent to which PMTCT data are entered, updated, submitted, and reported within established timelines.	• Adhere to established timelines for data submission and entry. • Monitor delayed reporting through routine dashboard reviews. • Send reminders to facilities prior to reporting deadlines. • Conduct follow-up with sites that submit incomplete or late reports.	PMTCT Coordinator, PMTCT Nurse, Medical Officer of Health, Strategic Information Component
Consistency	The degree to which PMTCT data remains uniform across registers, facilities, reporting periods, and related systems.	• Reconcile PMTCT database entries with antenatal registers, delivery books, infant testing logs, and other primary sources quarterly • Reinforce the use of standardized PMTCT indicators and definitions. • Conduct routine trend analyses to identify unusual fluctuations or discrepancies. • Cross-check monthly, quarterly,	PMTCT Coordinators, Medical Officers of Health, Strategic Information Component

		and annual reports for consistency.

14.2 STI/CI Database

Table 4: Recommended data quality activities and their definitions for the STI/CI Database

Data Quality Activity	Definition	Recommended Actions	Responsible Individual/Entity
Completeness	The extent to which all required STI client demographics, diagnoses, treatment information, laboratory results, and partner management details are fully documented in the database.	• Monitor reporting compliance from STI clinics and treatment sites. • Conduct routine reviews (quarterly) of incomplete records and missing variables. • Reconcile paper registers with electronic database entries quarterly. • Train healthcare workers on STI documentation standards and reporting requirements.	Contact Investigators, HIV Regional Coordinator, Strategic Information Component
Accuracy	The degree to which STI database information correctly reflects source documents, clinical findings, and laboratory reports.	• Conduct quarterly source document verification activities. • Verify source document data before entry. • Standardize STI reporting forms and data collection tools. • Conduct data review quarterly to identify	Contact Investigators, HIV Regional Coordinator, Strategic Information Component

		data entry errors and duplicates.	
Timeliness	The extent to which STI data are entered, updated, submitted, and reported according to established timelines.	• Establish clear reporting schedules for all STI clinics using standardized reporting forms for entry into database. • Monitor reporting timelines and follow up on overdue submissions. • Provide reminders to facilities before reporting deadlines.	Contact Investigators, HIV Regional Coordinator, Strategic Information Component
Consistency	The degree to which STI data remains standardized and coherent across facilities, reporting periods, registers, and electronic systems.	• Reconcile STI database information with primary sources quarterly. • Reinforce consistent use of STI case definitions and reporting standards. • Conduct trend analyses quarterly to identify unusual reporting patterns. • Compare monthly and quarterly reports to identify discrepancies.	Contact Investigators, HIV Regional Coordinator, Strategic Information Component

14.3 Data Quality Best Practices

- ✓ Review all entries before submission
- ✓ Enter data promptly
- ✓ Conduct routine verification of records (quarterly)
- ✓ Routinely reconcile entries in databases with source documents

14.4 Confidentiality and Security

The PMTCT and STI/CI Databases contain highly sensitive personal and clinical information. Strong confidentiality and security measures are essential to protect patient privacy, reduce stigma and discrimination, and maintain confidence in essential services provided.

Users must:

- Maintain strict confidentiality of patient information
- Never disclose patient information to unauthorized individuals
- Use secure passwords and avoid password sharing
- Log out after each database session
- Restrict data access to authorized personnel only
- Secure printed reports and physical records appropriately
- Report any suspected data breaches or unauthorized access immediately

15. Support Contacts

Table 5 indicates the support personnel for the PMTCT and STI/CI Databases in the HIV/STI/TB Unit.

DID YOU KNOW?

Sexually transmitted infections (STIs) are common and can affect anyone who is sexually active, regardless of age, gender, or background.

April is **SEXUALLY TRANSMITTED
INFECTION** *Awareness Month*

April is **SEXUALLY TRANSMITTED
INFECTION** *Awareness Month*

DID YOU KNOW?

Many STIs do not show symptoms, so you or your partner may have an infection without knowing it.

Regular testing is the only way to know your STI status.
