Welcome!!!

Here is an introduction to TSIS2.

The Treatment Support Information System or TSIS2 as it is commonly referenced, is a centralized web-based system that links all HIV treatment sites across Jamaica to facilitate better management of people living with HIV (PLHIV) through continuity of care across all access points. This system is critical to achieving our national priority areas and collates key indicators for the monitoring and evaluation of the epidemic in Jamaica.

Further to TSIS2 being used as a tool for the collection, validation, analysis, and presentation of aggregate and patient-based statistical data, it serves as an overall data quality system in the management of our treatment cascade data. The entirety of the National HIV Programme works ultimately towards eliminating the spread of HIV through prevention and advocacy measures. Conversely, the programme strives to move every patient diagnosed with HIV to a status of virological suppression. The PLHIV population's progression to suppression is measured through our treatment cascade.

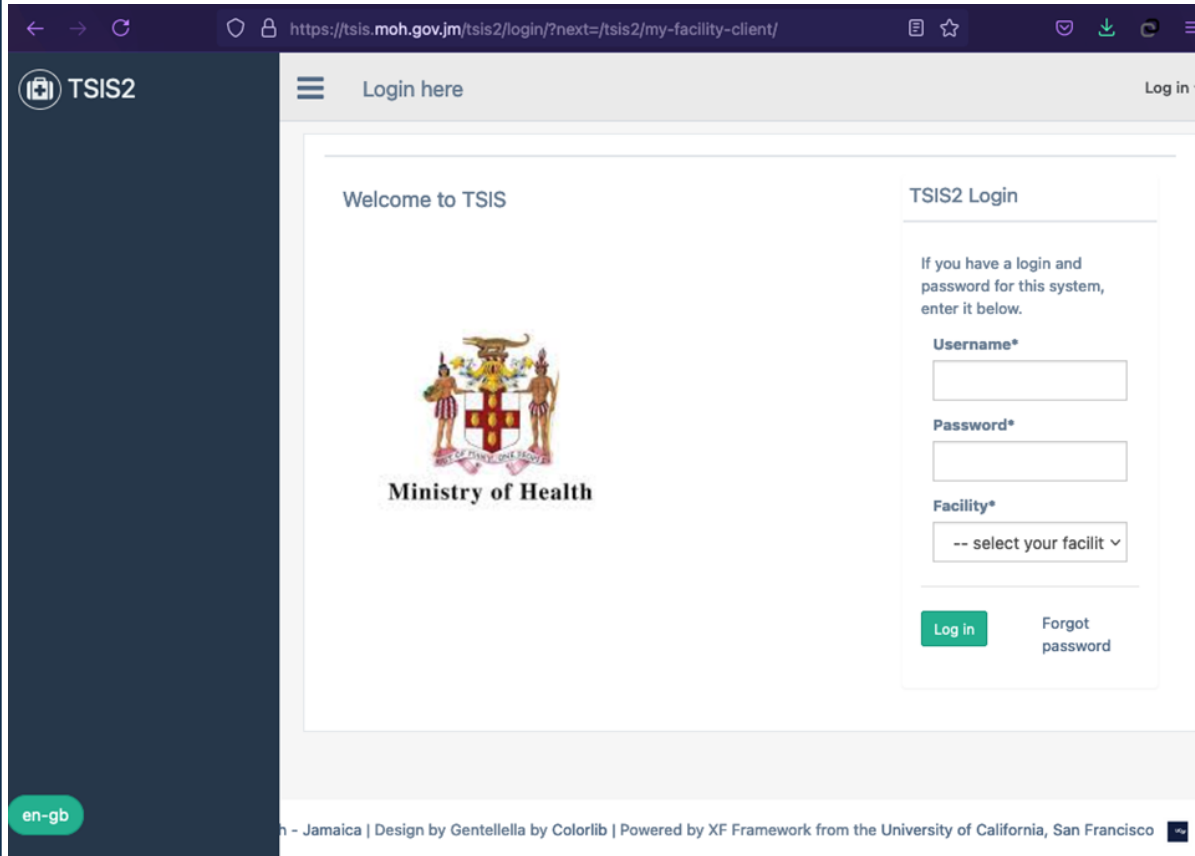

PLHIV diagnosed. These first two pillars are based on comprehensive estimates from multiple data streams for the former and case-based surveillance data for persons tested and confirmed HIV positive for the latter. The treatment cascade however, focuses on the seven (7) data elements or pillars after these as seen below:

- ✦ PLHIV Estimated
- ✦ PLHIV Diagnosed
- ✦ PLHIV Linked to Care
- ✦ PLHIV Retained in Care
- ✦ PLHIV Retained on ARVs
- ✦ PLHIV Viral Load Uptake
- ✦ PLHIV Viral Suppression

The system is currently operational across all Regional Health Authority HIV treatment sites as well as select Civil Service Organisation (CSO) and Non-Governmental Organisation (NGO) partners integral to HIV care with further utility among select private clinical practitioners providing service across Jamaica.

TSIS Login Screen

The screenshot shows a web browser window with the URL <https://tsis.moh.gov.jm/tsis2/login?next=/tsis2/my-facility-client/>. The page has a dark blue sidebar on the left with the 'TSIS2' logo and a language selector 'en-gb'. The main content area is white and contains a 'Welcome to TSIS' message, the coat of arms of Jamaica, and the text 'Ministry of Health'. To the right is the 'TSIS2 Login' form, which includes instructions: 'If you have a login and password for this system, enter it below.' The form has three fields: 'Username*' (text input), 'Password*' (password input), and 'Facility*' (dropdown menu with the text '-- select your facilit'). Below these fields are two links: 'Log in' (a green button) and 'Forgot password' (a text link). At the bottom of the page, there is a footer that reads: 'Jamaica | Design by Gentellella by Colorlib | Powered by XF Framework from the University of California, San Francisco'.

TSIS2 will be able to open in any browser of choice.

To navigate to TSIS2 you will need to type tsis.moh.gov.jm into the browser's URL.

- ▶ Please enter your username and password.
- ▶ Select the facility you wish to enter or query data. **(You will not be able to login to a facility you are not assigned to).**

P.S. If you have forgotten your password, please click the “Forgot password” link on screen and follow instructions given.

Typical Data Entry Screen Layout

Name of Section → Address

* Indicate required fields →

All date fields has a calendar →

If no information is available for the field missing, MUST be checked/ticked →

These fields has a list of items and one MUST be selected. →

Click Create / Update to Save / Update the record →

The screenshot shows a web-based data entry form titled "Address" with a close button (X) in the top right corner. The form contains the following fields and elements:

- Client***: A text input field containing "Alvin Doe-115067".
- Date***: A date input field with a calendar icon on the right.
- Alternate first name**: A text input field with a "Missing" checkbox below it.
- Alternate last name**: A text input field with a "Missing" checkbox below it.
- Street name**: A text input field with a "Missing" checkbox below it.
- Parish***: A dropdown menu with the placeholder text "search parish..." and a downward arrow.
- Community***: A dropdown menu with the placeholder text "search community..." and a downward arrow.
- Buttons**: "Create" and "Cancel" buttons at the bottom right.

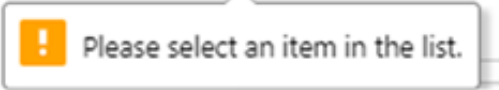

Annotations with arrows point from the text on the left to specific parts of the form: "Name of Section" points to the title; "* Indicate required fields" points to the asterisks on Client, Date, Parish, and Community; "All date fields has a calendar" points to the calendar icon; "If no information is available for the field missing, MUST be checked/ticked" points to the "Missing" checkboxes; "These fields has a list of items and one MUST be selected." points to the dropdown menus; and "Click Create / Update to Save / Update the record" points to the "Create" button.

Why **TSIS2** is not saving your entries.

Try again

Cancel

The main reasons the record is not saved are as follows

The form is incomplete. Usually this is when ☐ Missing was not checked/ticked	
A required item was not selected from a list	Employed* ----- Homeless* ----- 
A validation error; most of these will be date related. Simple scroll up/down to where the error is and make the correction	Date* 2019-01-04  Date can not be in the future
Click  until all corrections are make. The record will then be saved

- Edit
- Delete
- View details

By clicking the “Action” button beside any entry, you will see 3 options (Edit, Delete, View details), depending on privilege given.

“Edit” will allow you to make updates to entry.

“Delete” will remove entry.

“View details” will allow you to see entry in a small window.

Adding a new record

Steps to take when adding a new client to TSIS2:

Click on **My facility clients** tab and search if patient already exists at your site/facility using patient info (e.g., First, Middle, Pet, Last Name, D.O.B., Docket #, Mother's First and Last Name).

If patient does not exist, click on **All clients** tab and search if patient does exist at any other site/facility using patient info (e.g., First, Middle, Pet, Last Name, D.O.B., Docket #, Mother's First and Last Name).

If patient does exist in step 1 or 2, please edit/update said record where appropriate.

If patient does not exist in steps 1 or 2 then create a new patient profile by clicking **Register new** button. This will then open the registration window for you to create a new patient.

Scheduling Appointments

A patient is normally given an appointment to revisit the doctor at the site/facility, this appointment is mandatory and should be set at the end of every 'Physical exam' entry. The appointments given to revisit the doctor is the one that is used in reporting. Each category of staff that captures data on patients under the 'Services' tab, is also allowed to set their own appointments to see a patient.

Note that the appointments given to see other category of staff besides a doctor are not used in reports. Note that the next appointment date seen on a report is the appointment date for a visit to be seen by a clinician.

Image below showing appointments for patient 'Jack Doe-1000004'

Elimination of Mother-to-Child Transmission (EMTCT) Entry

The dual elimination of mother-to-child transmission (EMTCT) of HIV and syphilis has been identified as a global public health priority. The HIV/STI/TB Unit has committed significant work to ensure that the required WHO criteria for elimination of mother-to-child transmission are met. In order to meet the various WHO requirements an agile data capturing and reporting system must be in place and should be complemented by a robust data quality mechanism. To facilitate this, reports from the field should be timely, accurate and complete.

In TSIS2 the Elimination of Mother-to-Child Transmission (EMTCT) module will be used to identify and monitor HIV positive women throughout their pregnancy.

CLICK

Image above showing EMTCT module when clicked (this will only appear when a female patient record is retrieved).

Click 'Add new' button if the patient has a more recent pregnancy than that on system.

Click 'Actions' button then 'Edit' if you are updating the current pregnancy.

The screenshot displays the TSiS2 EMTCT module interface. A modal form titled 'Pregnancy' is open, allowing for a new pregnancy entry for client 'Jane Doe-1000'. The form includes the following fields:

- Client*: Jane Doe-1000
- Facility*: Comprehensive Clinic - Adults
- ANC Care?:
- LMP date: (calendar icon)
- EDD date: (calendar icon)
- Parity: (up/down arrows)
- Gravida: (up/down arrows)
- Blood type: (dropdown menu)
- Planned delivery mode: (dropdown menu)
- Has outcome?: No
- Maternal death: (dropdown menu)

Buttons for 'Create' and 'Cancel' are at the bottom of the modal. The background shows the 'Services' section with a 'Pregnancy' tab selected and an 'Add new' button. The footer contains copyright information: © Ministry of Health - Jamaica | Design by Gentellella by Colorlib | Powered by XF Framework from the University of California, San Francisco.

Image above showing EMTCT module when 'Add new' is clicked under the Pregnancy tab to make NEW pregnancy entry.

The image shows a screenshot of the TSIS2 EMTCT module interface. A modal window titled "Antenatal Visit" is open, allowing for the creation of a new pregnancy entry. The form includes the following fields and options:

- Client***: Jane Doe-1000
- Facility***: Comprehensive Clinic - Adults
- Date of visit***: (Empty field with a calendar icon)
- Pregnancy***: (Dropdown menu showing "*****")
- Checkboxes**:
 - ☐ HIV done?
 - ☐ HB done?
 - ☐ Sickle done?
 - ☐ Syphilis Initial done?
 - ☐ Syphilis Final done?
 - ☐ Syphilis Repeat done?
- Notes**: (Text area)

At the bottom of the modal are "Create" and "Cancel" buttons. The background shows the main application interface with a sidebar menu, a header with "TSIS2" and "Services", and a client profile for "Jane Doe-1000". A footer at the bottom of the page reads: "© Ministry of Health - Jamaica | Design by Gentellella by Colorlib | Powered by XF Framework from the University of California, San Francisco".

Image above showing EMTCT module when 'Add new' is clicked to make NEW pregnancy entry.

The screenshot displays the EMTCT (Electronic Maternal and Child Tracking) module interface. A modal window titled "Newborn" is open, allowing for the creation of a new newborn record. The form includes the following fields:

- Client***: Jane Doe-1000
- Facility***: Comprehensive Clinic - Adults
- Pregnancy***: A dropdown menu currently showing "*****".
- Date delivered***: A date picker field.
- Pregnancy outcome***: A dropdown menu currently showing "*****".
- Notes**: A large text area for additional information.

At the bottom of the modal are "Create" and "Cancel" buttons. The background shows the patient record for Jane Doe-1000, with a sidebar on the left containing navigation options like Dashboard, Recent Activity, Registration, Demographics, Physical exam, Laboratory, Medication & history, Contact tracing, Services, EMTCT, and Appointments. The EMTCT option is currently selected.

Image above showing EMTCT module when 'Add new' is clicked to make NEW entry to monitor new born baby of current patient's pregnancy.

User Roles & Matrix

There are several different categories of staff at the sites/facility. Some of which will interact with TSIS2, these staff are:

Data entry clerk	Nurse	Doctor	Contact investigator	Psychologist	TCSO
Nutritionist	Adherence counsellor	Social worker	Case manager	Region manager	

-  Only persons assigned a Data entrant role will be able to Add or Edit patient records in the system.
-  Only the Data entrant is allowed to search across sites.
-  Only persons assigned a Data entrant role will be able to Add or Edit patient records in the system.

Only persons assigned a Data entrant role will be able to Add or Edit patient records in the system.

Only the Data entrant is allowed to search across sites.

No user can delete a record at the field, parish or regional level.

All other staff categories can only view records for the site assigned to.

The contact investigator notes will only be able to be viewed by the contact investigator and the data entrant.

The psychologist notes will only be able to be viewed by the psychologist, the doctor and the data entrant.

Example: A social worker at Comprehensive will only be able to view records of clients at Comprehensive Clinic only.

Only users with Report privileges will be able to view reports.

TSIS2 Reports

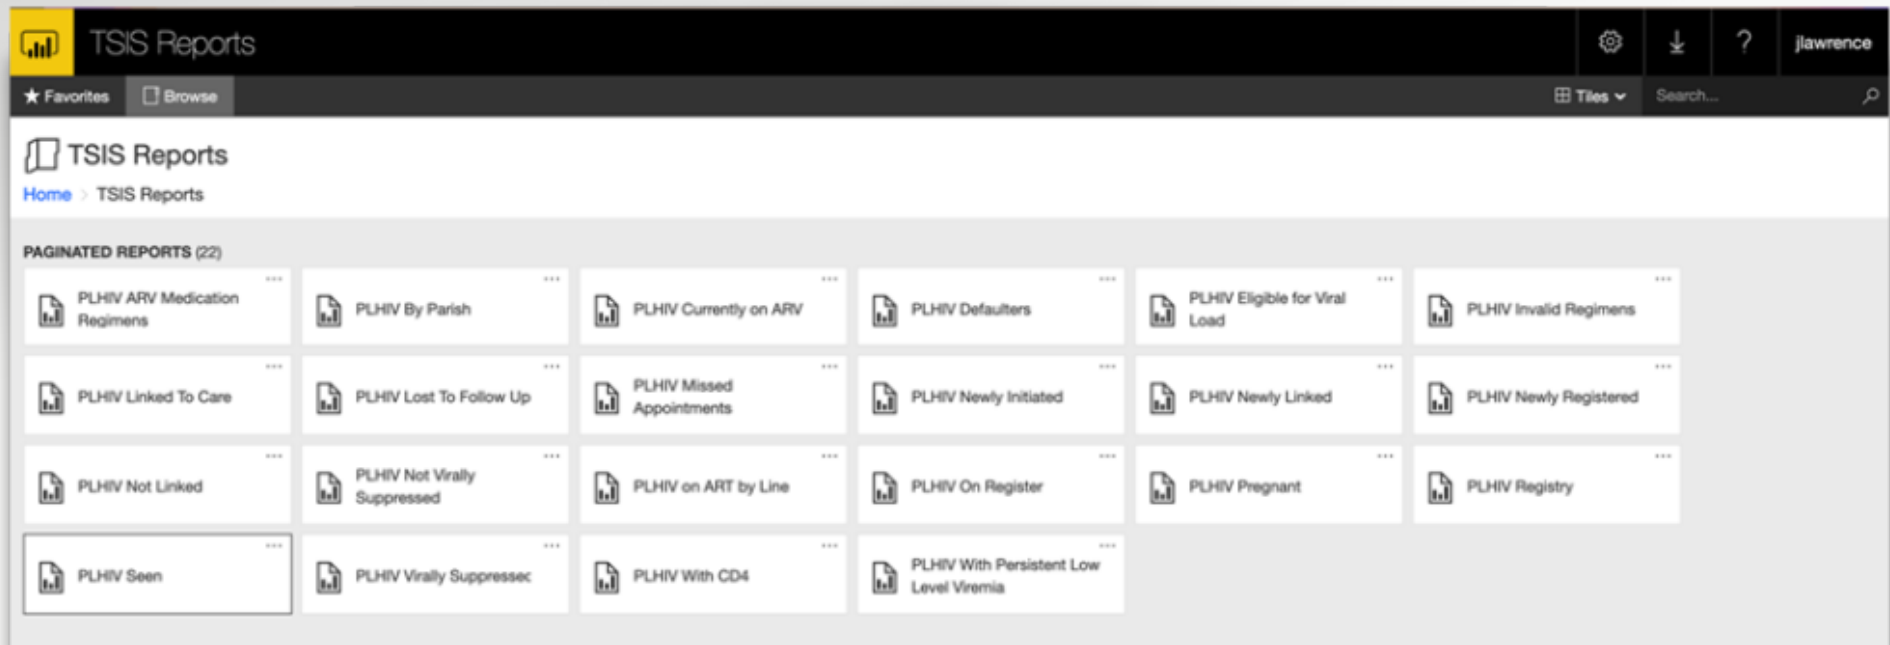

TSIS2 reports web page is where you would go to run and pull down all clinical and administrative information on patients within your site or region (depending on user's permission given). TSIS2 reports will be able to open in any browser of choice. To navigate to TSIS2 reports you will need to type **tsis-reports.moh.gov.jm** into the browser's URL.

A screenshot of the TSIS Reports login screen. The title "TSIS Reports" is at the top left. Below it, there are two input fields: "User Name:" and "Password:". To the right of the "Password:" field is a "Logon" button.

Image above showing tsis-reports.moh.gov.jm login screen.

The image above showing several folders available upon login. These report folders are visible depending on user permissions.

The image above showing a list of reports available when you click on the **'TSIS2 Report'** folder.

The screenshot displays the 'TSIS Reports' web application. The top navigation bar includes a logo, the title 'TSIS Reports', and user controls for settings, download, help, and a user profile labeled 'jlawrence'. Below this, a breadcrumb trail shows 'Home > TSIS Reports > PLHIV On Register'. A 'Logout' link is positioned in the top right corner. The main content area features a series of filter controls arranged in two columns. The left column contains: 'Current Organization:' with a dropdown set to 'All'; 'Current Region:' with a dropdown set to 'All'; 'Current Parish:' with a dropdown set to 'All'; 'Current Site:' with a dropdown set to 'All'; and 'Hide Sensitive Data' with radio buttons for 'True' and 'False'. The right column contains: 'Last Visited Organization:' with a dropdown set to 'All'; 'Last Visited Region:' with a dropdown set to 'All'; 'Last Visited Parish:' with a dropdown set to 'All'; and 'Last Visited Site:' with a dropdown set to 'All'. A 'View Report' button is located to the right of these filters.

Frequently Asked Questions

Question: How secure is my private information that will be stored in TSIS2?

Answer: (Track record)

- a. Since the first treatment site database system was designed in 2008 to assist in managing clients on ARV and to report on early warning indicators; there has never been a breach of that confidentiality.
- b. This new TSIS 2.0 system has seen major improvements in further securing the database system. Security, confidentiality and privacy of client's records are more tightly integrated into the system to give clients the confidence that their personal and clinical data are secure and free from unwanted access.

Answer: (Advances in technology)

- a) Built-in security features
- b) databases
- c) webservice
- d) VPN
- e) etc

Question: Why should one share all their information asked by the system, including their sexual orientation and clinical information?

Answer: (as an individual)

- a. To ensure clients are given the best care and proper management all the information asked is necessary.
- b. Information that is shared between sites (with permission) will not include the client's sexual orientation.

Answer: (as a nation)

- a. There are different indicators (input, output, impact) that are reported on to determine Jamaica's success in managing its key populations. Each client's information ensures the overall picture is adequately represented.
- b. The correct representation determines what and how interventions are adjusted to provide better care individually and at the clinic, parish, regional and national levels.
- c. The major funding agencies (Global Fund, PAHO, PEPFAR, USAID, etc) use this data for fund allocation.

d. For non-government sites; An individual sexual orientation will not be shared if you attend a government site, except with a DOCTOR who logs into the system to review the patient's record. No other staff member at a government site should be able to view a client's sexual orientation.

Question: What are some of the other safe guards to ensure one's data is private?

Answer:

- a. A team of professional persons are employed to ensure patient confidentiality is not breached.
- b. As a part of their employment each government worker in the health service are required to sign an official non-disclosure agreement (The Official Secrets Act).

Question: What are my responsibilities in helping to safe-guard my information in the database? (Question that may be asked by clients)

Answer:

- a. Respect and ensure patient confidentiality.

Question: Will anyone who logs into the system be able to see all my data.

Answer:

- a. No.
- b. Only persons authorized at the sites the patient attends will be able to see patient data.

Question: How do I return a person that was marked out of care or dead?

Answer: (Death Date)

- c. These records can be recovered by removing the death date through editing the client's record.
- d. Whilst records marked out of care can be recovered using the In Care Tab under Registration page in TSIS2.

Question: How do I change reason lost to follow status?

Answer: (By editing, the field which can be found in the HIV CT Enrolment Tab)

- a. Refer to the data entry section of the manual for further visuals.

Question: Why am I unable to find some client's records when searched under my facility client?

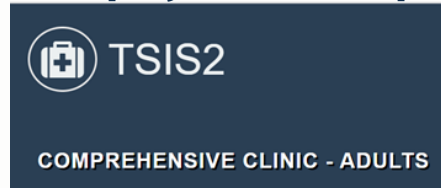

Answer: (Omission of docket number)

- a. Please ensure there is a docket number attached to the client that is representative of the site in question.
- b. Liaise with SI Team MOHW if there are any further challenges.

Question: How do I determine which site I am currently logged into on TSIS2?

Answer: (Site Name is displayed in the top left corner of the TSIS2 Application)

a. See image

Question: How do I determine if a patient already exists in TSIS2?

Answer: (By doing a search from the All-Clients Menu in the TSIS2 Application)

a. See image

Reports Definitions

Currently on ARV

Description

Use

Reporting Level

Responsible Officer

Reporting Frequency

How to review for data quality:

This report provides cumulative number of all PLHIV who:

- 1) are retained [have a future next appointment or have not missed or last missed appointment was less than 90 days ago]
- 2) have a 'first ART date'
- 3) Have a current prescription exceeding the reporting period- if prescription expired, it was less than 28 days ago.

To monitor initiation and retention on ART (2nd 90)

VL Eligibility Report

Description

This report provides cumulative number of all PLHIV who are eligible for viral load testing.

PLHIV are eligible:

1. six months after initiation on ART
2. six months after last unsuppressed viral load
3. six months after first suppressed viral load
4. twelve months for suppressed clients with two consecutive valid suppressed viral load results.

Use

Used to identify clients who are due a viral load test according to ART or suppression status.

Client Transfer SOP

There are three (3) types of transfers possible within the HIV/AIDS program:

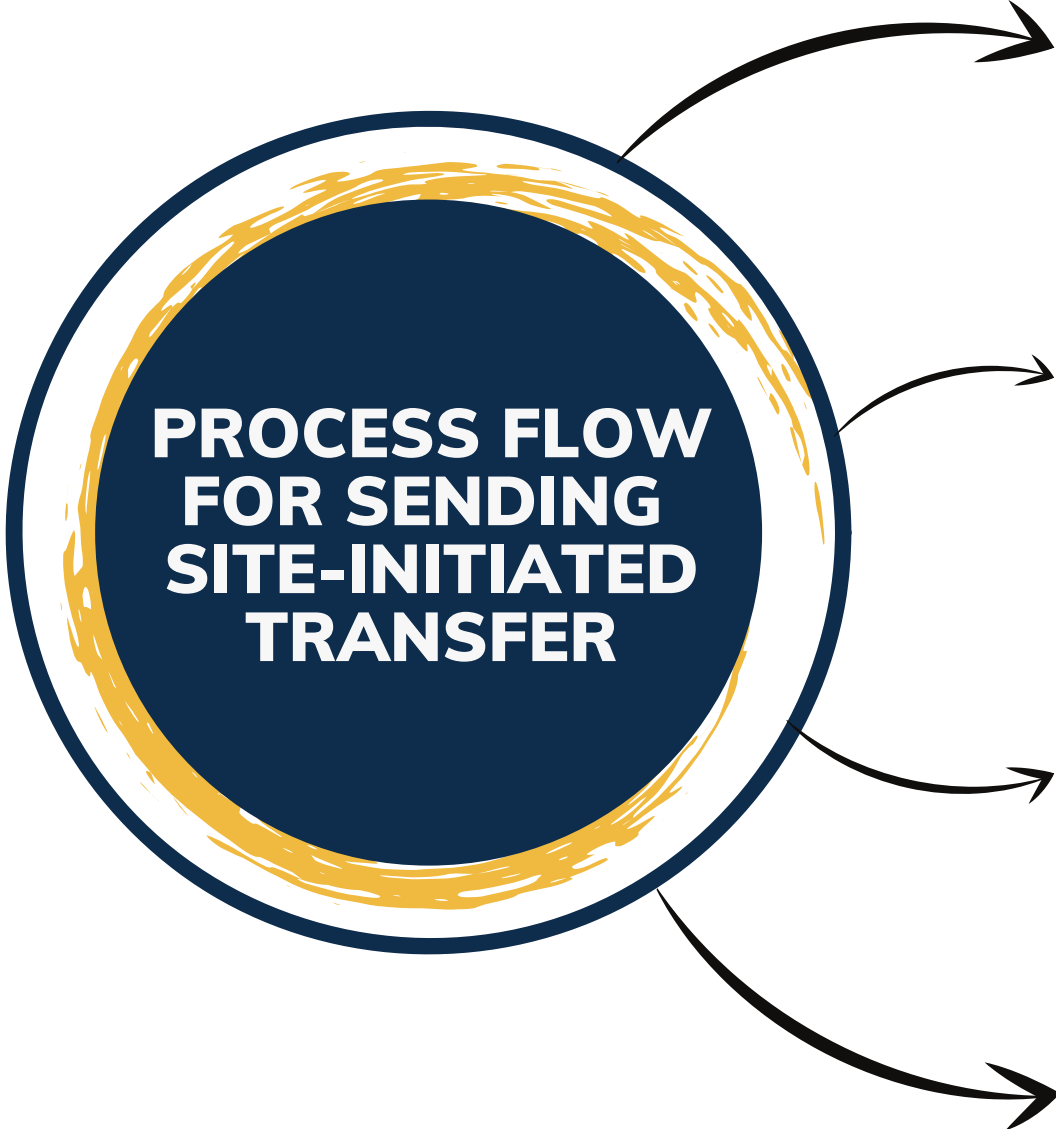

- Sending Site Initiated Transfer
- Receiving Site Initiated Transfer
- Silent Transfer: Patient attends new site for 12 months

Sending site-initiated transfer

A sending site-initiated transfer is accommodated when:

- Patient requests to be transferred to another site. (Moving, more comfortable at another site etc.)
- Site discusses with patient, and patient agrees to be transferred (lower transportation cost, stable patient requiring less monitoring at distant facility etc.)
- Type A facility refers a client to their nearest treatment site for further management

PROCESS FLOW FOR SENDING SITE-INITIATED TRANSFER

1

Patient request to be transferred.

2

Sending site completes a "referral A form" given to the client, and the completed Transfer template submitted to SI submitte

3

Receiving site assumes patient management and updates existing client record on TSIS

4

SI updates transfers ownership of the record in TSIS

Note

- 1. The “Referral A’ form is a standard document in the public health system which has 2 copies. The form instructs which copy goes to the receiving site.**
- 2. The transfer template upon completion is submitted to the data entrant copying the SIA. Records are verified before transfer is actioned.**
- 3. Dockets numbers are never changed. When a patient goes to a new site the ‘new’ docket number is appended to the record. This allows the client to be tracked regardless of the number of dockets they have.**

Receiving **Site-Initiated** Transfer

A receiving site-initiated transfer is accommodated when:

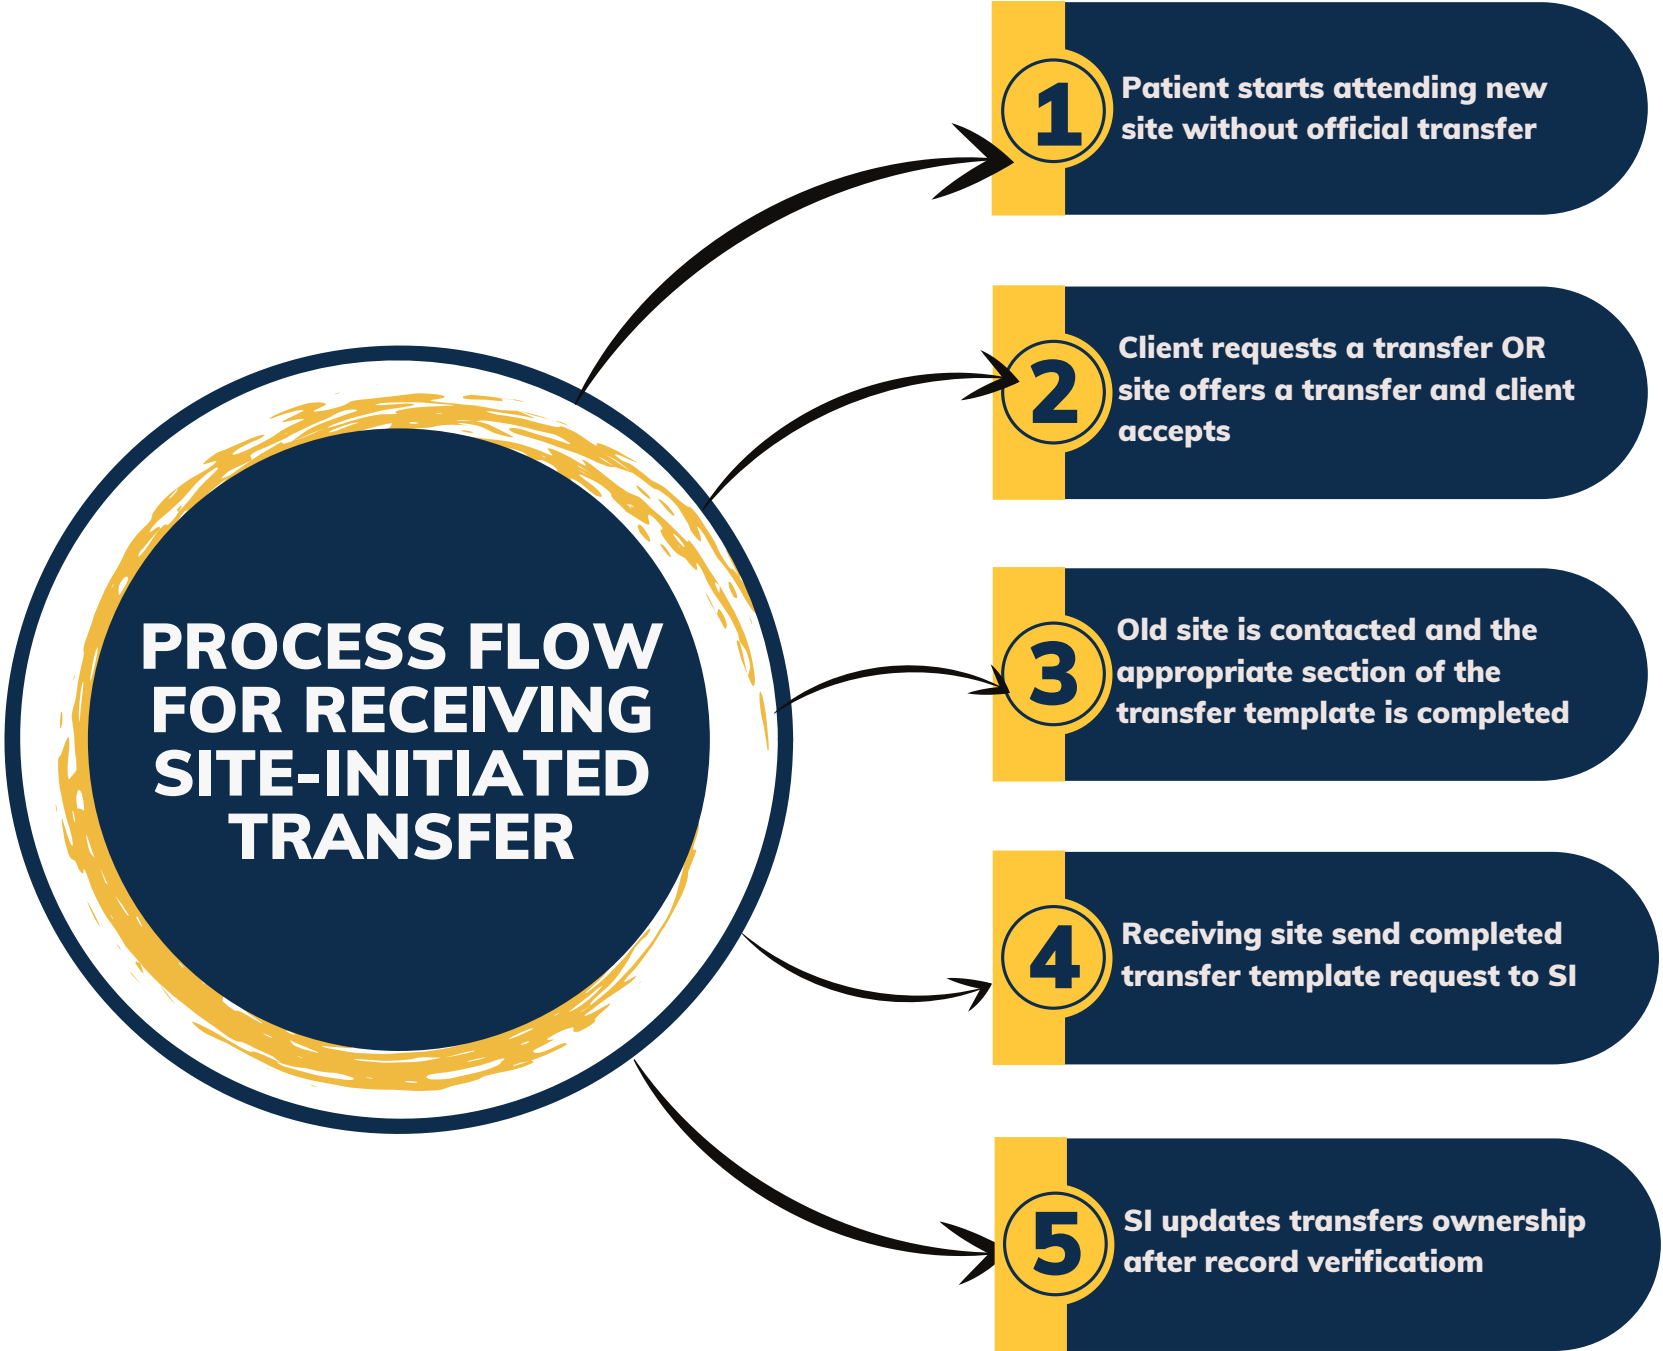

Patient starts attending new site and informs they will be attending permanently (client-initiated request).

After consistently providing care, the patient is offered and agrees to a transfer from former treatment site (site offered transfer).

PROCESS FLOW FOR RECEIVING SITE-INITIATED TRANSFER

1

Patient starts attending new site without official transfer

2

Client requests a transfer OR site offers a transfer and client accepts

3

Old site is contacted and the appropriate section of the transfer template is completed

4

Receiving site send completed transfer template request to SI

5

SI updates transfers ownership after record verification

Silent Transfer

A silent transfer is accommodated when:

The client has been attending a site which is not their primary site for over 1 year. This process is initiated at the national level by the Strategic Information (SI) Component.

SILENT TRANSFER

```
graph LR; A((SILENT TRANSFER)) --> B[1 Patient starts attending new site without official transfer]; A --> C[2 SI recognizes regular clinic appointment attendance in 12 month period]; A --> D[3 SI contacts the current site to confirm that the client intends to stay there]; A --> E[4 SI effects transfer and informs both sites of the transfer];
```

The diagram illustrates the 'SILENT TRANSFER' process. A central dark blue circle with a yellow brushstroke border is labeled 'SILENT TRANSFER'. Four curved arrows point from this circle to four separate dark blue rounded rectangular boxes on the right. Each box contains a yellow circle with a number and a description of a step in the process.

1

Patient starts attending new site without official transfer

2

SI recognizes regular clinic appointment attendance in 12 month period

3

SI contacts the current site to confirm that the client intends to stay there

4

SI effects transfer and informs both sites of the transfer

New TSIS2 Updates

There have been a few updates that have recently been added to TSIS2. A few of these updates are:

- **SMS** – This feature allows TSIS2 to automatically send text reminders to patients about their upcoming appointments. If a patient wishes not to be sent a message, this feature can be disabled by clicking the check box labeled “**Exclude from SMS**”.
- **Comorbidities** – This feature allows you to indicate the types of disease or condition that a patient may have.
- **Psychosocial** – There have been some updates within the “**Services**” module where a few of the pre-existing tabs were updated and the TRAT tab was created.

SMS Feature

The screenshot displays the TSIS2 interface. On the left is a dark sidebar with a menu including Dashboard, Recent Activity, Registration, Demographics, Physical exam, Laboratory, Medication & history, Contact tracing, Services, Appointments, Clients, Appointments, and Reports. The main area shows the 'Registration' tab for 'Jane Doe'. A modal window titled 'Client' is open, showing fields for 'Father last name', 'Father first name', 'NHF Card' (333), 'TRN Number' (999), 'Death date', 'Cause of death', and 'SMS Notification Number' (876-543-8613). There are checkboxes for 'Missing' (checked), 'Exclude from SMS' (unchecked), and 'SMS Notification Number' (checked). The modal has 'Update' and 'Cancel' buttons at the bottom.

The image above shows the SMS feature when:

Click the 'Registration' to the left of the screen, then click the "Actions" button at the right-hand corner of the screen. Click "Edit" and scroll to the end of the page. Here you will see "SMS Notification Number" to add the patient's cell number. Remember to click "Exclude from SMS" if the patient wishes not to be reminded.

Comorbidities Feature

The screenshot displays the TSIS2 Physical Examination form for Jane Doe. A modal window titled "Physical Examination" is open, showing fields for Alcohol, Using family planning, Patient stability status, and Next appointment date. The Comorbidities section is active, showing a search bar and a list of conditions including HTN, Ischaemia, Cerebrovascular Disease, Autoimmune Disease, and Diabetes. The background form includes fields for Date of birth, Death date, and a search bar for examined-by lastname.

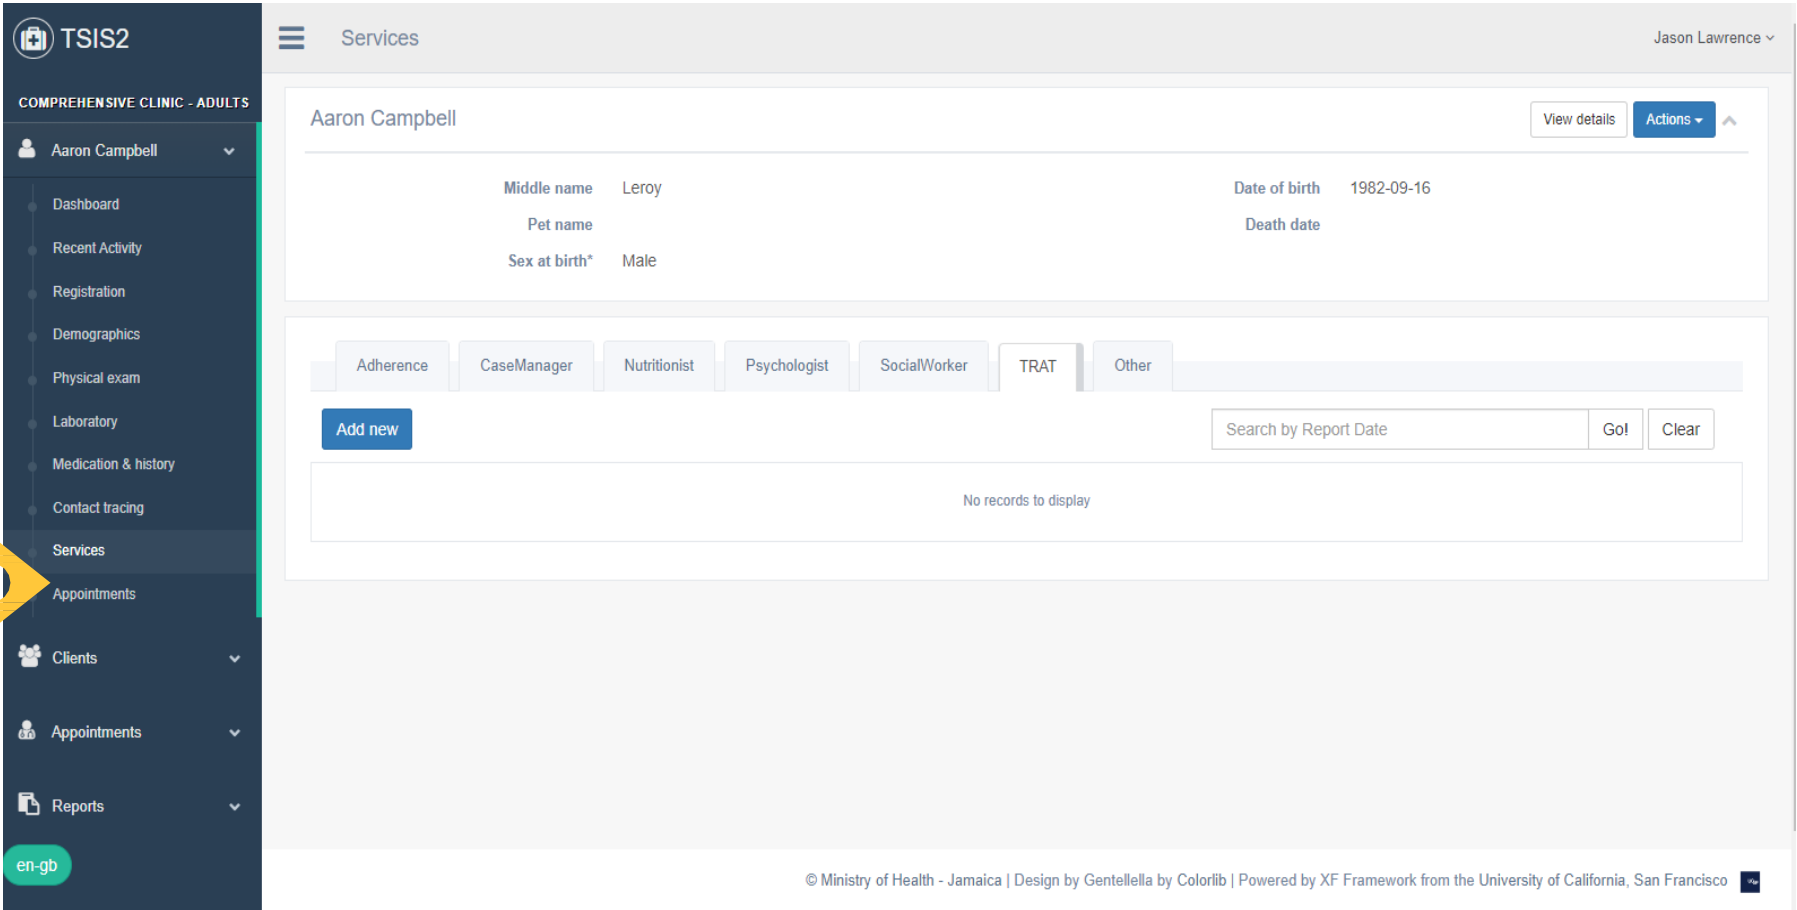

The image above shows the comorbidities feature when:

Click the **'Physical Examination'** to the left of the screen, then click the **"Add new"** button and scroll to the end of the page. You can add multiple comorbidities.

Psychosocial Feature

CLICK 

The screenshot displays the TSIS2 web application interface. On the left, a dark sidebar menu lists various navigation options: Dashboard, Recent Activity, Registration, Demographics, Physical exam, Laboratory, Medication & history, Contact tracing, **Services** (highlighted), Appointments, Clients, Appointments, and Reports. The main content area is titled 'Services' and shows a patient profile for 'Aaron Campbell'. The profile includes fields for Middle name (Leroy), Date of birth (1982-09-16), Pet name, Death date, and Sex at birth* (Male). Below the profile, there are tabs for different service types: Adherence, CaseManager, Nutritionist, Psychologist, SocialWorker, TRAT, and Other. The 'Psychologist' tab is currently selected. Below the tabs, there is a search bar labeled 'Search by Report Date' with 'Go!' and 'Clear' buttons. A message 'No records to display' is shown below the search bar. The footer of the page contains copyright information: '© Ministry of Health - Jamaica | Design by Gentellella by Colorlib | Powered by XF Framework from the University of California, San Francisco'.

The image above shows the psychosocial tabs when you click “**Services**”.

Psychosocial Feature (TRAT)

The screenshot displays the TSIS2 web application interface. On the left is a dark sidebar with a menu including Dashboard, Recent Activity, Registration, Demographics, Physical exam, Laboratory, Medication & history, Contact tracing, Services, Appointments, Clients, Appointments, and Reports. The main content area shows the 'Services' tab for a patient named Jane Doe. A modal window titled 'TRAT Summary' is open in the center, containing the following fields: Client* (Jane Doe), Facility* (empty), Performed by (search name...), Report date* (calendar icon), Trat reason* (-- please select item in list --), Trat done* (-- please select item in list --), Action* (-- please select item in list --), and Notes* (text area). At the bottom of the modal are 'Create' and 'Cancel' buttons. The background interface includes a top navigation bar with 'Services' and a user profile 'Sheldon Whorms', and a bottom footer with copyright information.

The image above shows the TRAT tab when clicked.

Click the 'Add new' button if the patient needs to do a new TRAT.

Data Quality Guidelines

Data Quality Activity	Definition	Recommended Action	Responsible Individual
Completeness	The extent to which all required patient information, clinical encounters, laboratory results, treatment details, and reports are fully captured in the TSIS database without omissions.	• Conduct routine reconciliation between patient medical records and TSIS entries. • Generate monthly completeness reports to identify missing records or data elements • Follow up with requisite personnel regarding incomplete documentation. • Train healthcare workers and data entry personnel on required data elements and documentation standards.	Treatment Care and Support Officer, Data Entrant
Accuracy	The degree to which data entered into the TSIS database correctly reflects the information documented in the original medical records and supporting source documents.	• Conduct regular source document verification exercises comparing TSIS entries against medical records • Validate patient information before entry into TSIS. • Implement routine supervisory reviews of entered records. • Correct identified discrepancies promptly and document amendments where necessary.	Treatment Care and Support Officer, Data Entrant
Timeliness	The extent to which patient information is entered, updated, and reported in TSIS within the established reporting timelines after documentation in the medical record.	• Establish clear timelines for updating patient records in TSIS • Monitor reporting timelines using routine reporting trackers.	Treatment Care and Support Officer, Data Entrant

Consistency

The degree to which patient information remains uniform and coherent across medical records, registers, laboratory reports, pharmacy records, and the TSIS database over time.

- Reconcile data between medical records, laboratory systems, pharmacy records and TSIS.
- Reinforce the use of standardized forms, indicator definitions, and reporting procedures across all sites.
- Conduct periodic trend analyses to identify unusual fluctuations or inconsistencies.
- Review duplicate or conflicting patient information and resolve discrepancies promptly.

Best Practices for TSIS Data Entry

The following best practices should be followed to improve data quality within the TSIS database:

- ✓ Review all entries against the medical record before saving.
- ✓ Update records immediately after receiving new patient information.
- ✓ Conduct routine weekly reviews of entered records.
- ✓ Ensure all mandatory fields are completed before submission.
- ✓ Use standardized abbreviations, codes, and documentation practices.
- ✓ Report and correct identified discrepancies promptly.

Confidentiality and Security

Confidentiality and security are critical components of TSIS data management, as the database contains sensitive personal and medical information. Since medical records serve as the primary source of information for TSIS data entry, all users must ensure that patient information is handled with the highest level of privacy and professionalism.

Maintaining strong data protection measures safeguards patient rights, strengthens public trust, and ensures compliance with national policies, ethical standards, and applicable health information regulations.

All TSIS Users Must:

- Keep all patient information confidential.
- Access only records required for assigned duties.
- Never share usernames or passwords.
- Log out of TSIS after each session.
- Store physical medical records securely when not in use.
- Avoid printing unnecessary patient information.
- Ensure computer screens displaying patient information are not visible to unauthorized persons.
- Report any suspected data breaches or unauthorized access immediately.
- Notify system administrators promptly when staff members are no longer affiliated with the programme or require removal of access.
